R. FOWCTION: Caralyzes the conversation of phosphatidic acid (PA) to diacylglycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-

phosphate (S-1-P) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Birney E., Hayashizaki Y.;

en-glycerol + phosphate.
-!- SUBUNIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUB SPECIFICITY: Expressed in the brain.
-!- SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase
                                                                                                                                               Gaps

```
This is the amino acid sequence of human mature phosphatidic acid phosphatase-beta (PAP-beta), an enzyme that catalyses the conversion of phosphatidic acid into diacylglycerol. 3 Variants of human PAP, i.e. PAP-et alpha 1 and 2 (see AAW79284-85), PAP-beta (see AAW79286) and PAP-gamma (see AAW79287) have been identified. The invention provides PAP-gamma (see AAW79287) have been identified. The invention provides PAP-gamma (see AAW79287) have been identified. The invention provides PAP-gamma (see PAY69086-89) and PAP-prides. A method of preparing PAP in a transformed host cell, and a method of using PAP to dephosphorylate a substrate, especially lysophosphatidic acid, ceramide 1 phosphate or sphingosine 1-phosphate, particularly for production of candsylglycerol, but also monoacylglycerol, ceramide and signal transduction. Sequences that encode PAP are potentially and signal transduction. Sequences that encode PAP are potentially useful, in gene therapy, for treatment of cancer (PAP may be tumour suppressors, PAP-alpha is expressed at lower levels in cancer cells than continual cells of same tissue type), inflammatory disease and diabetes-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention discloses a composition comprising two or more isolated rat

Claim 1; Page; 1017pp; English.

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

WPI; 2003-268312/26. GENBANK; NP\_003704

```
or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal competed to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polympetides or their antibodies. The polymucleotide or the compound that medulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more polympetides or their antibodies. The polymucleotide or the compound that confining pain in the paint of the sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed the sequence data for this patent did not form part of the printed specification, which is differentially expressed during pain. Note:

The sequence data for this patent did not form the dating pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New substantially pure Tau-related polypeptides and polynucleotides, useful for diagnosing and/or treating neurological conditions with aberrant expression of the Tau-related polypeptide, such as Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tau; PPAP2A; PPAP2B; IHPK1; IHPK3; IHPK2; FLJ20530; DJ434014.5; EZF1;

The invention relates to tau-related polypeptide consisting essentially of an amino acid sequence selected from PPAP2A, PPAP2B, IHPKI, IHPK3, IHPK2, FLJ20530, DJ434014.5, EZFI, LOC1137424, LOC113179 and KTAA0826 (ADM72102-ADM72112 respectively). The methods and compositions of the present invention are useful for the diagnosis and/or treatment of meurological diseases or conditions associated with aberrant expression or activity of the Tau-related polypeptide, such as Alzheimer's disease and Parkinson's disease. The present sequence represents a human tau-related polypeptide homologue PPAP2B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New PRO nucleic acid or polypeptide, useful for preparing a pharmaceutical composition for diagnosing or treating psoriasis in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Schoenfeld J, Williams PM,

A protein of the invention has antification decoded by it. A protein of the invention has antiatheric, antiatheric, antiatheric, antiatheric, antiatheric, antiatheric, antiatheric, antiatheric, antiatheric, antiatheric, and respiratory activity. A polymucleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, indopathic inflammatory myopathy, Sjograch's systemic solerosis, an idiopathic inflammatory myopathy, Sjograch's syndrome, systemic accordosis, autoimmune haemolytic anaemia, autoimmune transpictures, immune-mediated renal transpication and dispathic demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, a hepatobaliary dispersion of the contral or peripheral nervous a chronic inflammatory demyelinating polyneuropathy, and hepatobaliary dispersion of the contral or heropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disease, infectious or autoimmune chronic active hepatitis, primary biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, binflammatory bowel disease, glucen-sensitive enteropathy, Whipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, an allergic disease, asthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease of the lung eosinophilic pneumonia; diopathic pulmonary fibrosis, hypersensitivity pneumonitis, a transplantation associated disease, graft rejection or graft-versus-host disease. The present sequence represents a PRO protein

The invention discloses a composition comprising two or more isolated rate or human polymuclectides or a polymuclectide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymuclectide, a host cell comprising the wortor, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a arrangle that increases or decreases the expression of the polymuclectide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymuclectide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound cor identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating computates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating colymperides or their antibodies. The polymuclectide or the compound that the regulates the specification, which is differentially expressed during pain. Note: the specification, but was obtained in electronic form directly from WIPO at fip. whipo.int/pub/published_pot_essed medicament for electronic form directly from wipo.int/pub/published_pot_essed medicamen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Phosphatase polypeptides and encoded polynucleotides with substrate-specificity for prenylphosphoric acid, applicable in mass-production of all-trans-prenyl alcohols by culturing transformants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel phosphatase polypeptide, exhibiting substrate-specificity for not less than 15C prenylphosphoric acid. The polymucleotides and encoded polypeptides are applicable in mass-production of all-trans-prenyl alcohols. The sequence represents a rat phosphatase polypeptide of the invention

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in nauronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprishing the one or more polymeptides or their antibodies. The polymucleotide or the compound that compliance its activity is useful for preparing a medicament for treating pain (CI) and spared nerve injury (SNI) in an animal (e.g. gene the sequence data for this patent did not form part of the printed the sequence data for this patent did not form part of the printed specification) which was obtained in electronic form directly from WIPO at sequence of the sequence of the printed sparent did not form part of the printed sparentication.
                                                                                                                                                                                                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60.6%; Score 66; DB 7; Length 282; llarity 50.0%; Pred.
